What are the risks and what could I get in return?

Lower risk

Higher risk

The risk indicator assumes you keep the product for a minimum of 5 Years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to cash in early. You may have to pay significant extra costs to cash in early.

Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The Sub-Fund will at times be significantly exposed to global equity and commodity markets and therefore will carry a moderate level of risk. It is expected that, as a result of the investment approach to be implemented, the Sub-Fund will exhibit a moderate degree of performance volatility and a probability of short-term losses.

We have classified this product as class 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact the capacity of the fund to pay you.

Be aware of currency risk. The underlying funds may receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Be aware of liquidity risk. You may not be able to sell your product easily or you may have to sell at a price that significantly impacts on how much you get back.

If not able to pay you what is owed, you could lose your entire investment.
